Re: Third Quarter 2001 Surface and Subsurface Water Monitoring Report
ECC Superfund Site
Zionsville, Indiana

Dear Mr. Ohl:

This report summarizes the monitoring of the till wells, the sand/gravel wells, and the surface water of the Unnamed Ditch at the ECC Superfund Site in Zionsville, Indiana during the third quarter of 2001.

The specific tasks completed during the third quarter of 2001 included:

- Collection of water level measurements from 16 monitoring wells on August 13, 2001;
- Sampling of the 6 off-site till monitoring wells and the 5 off-site sand/gravel monitoring wells, including ECC MW-13, during the week of August 13, 2001;
- Sampling of the 4 on-site till monitoring wells from August 13, 2001 to August 23, 2001;
- Sampling of 2 surface water locations within Unnamed Ditch during the week of August 20, 2001;
- Analysis of all the surface and subsurface water samples collected for the parameters specified in the Revised Remedial Action, Exhibit A, Revision 2, dated May 7, 1997 (Revised Exhibit A);

The following section provides a brief description of the third quarter sampling activities. The third quarter water level measurements, analytical results for the surface and subsurface water samples, and the field measurements and purge data are summarized in the attached tables.

A. Subsurface Water Flow Determination**1. Data Collection**

On August 13, 2001, the depth to water was measured in four on-site till monitoring wells, six off-site till monitoring wells, one off-site piezometer, and five off-site sand/gravel monitoring wells using an electronic water level meter.

The till and sand/gravel monitoring well locations are shown on Figure 1. Measurements were recorded to the nearest 0.01 foot. The depth to water measurements and the corresponding water elevation data derived from these measurements are presented in Table 1.

2. Subsurface Water Elevation Data

Subsurface water elevations and contours for the sand/gravel unit at the site, for the third quarter 2001, are presented in Figure 2.

B. On-Site and Off-Site Subsurface Water Sampling

Subsurface water samples (including duplicates) were collected from on-site till monitoring wells T-1 through T-4A, off-site monitoring wells T-6 through T-10, off-site sand/gravel monitoring wells S-1 through S-4A, and ECC MW13 between August 13, 2001 and August 15, 2001. Due to the slow recovery of the T-5 till well, subsurface water samples were collected between August 13, 2001 and August 23, 2001 from this well. The on-site subsurface water sample results are summarized in Table 2. The subsurface water sample results for the off-site till and off-site sand/gravel monitoring wells are summarized in Table 3 and Table 4, respectively.

All samples were collected as described in Section 6.3 of the Radian Revised Remedial Action Field Sampling Plan (FSP), Revision 4, dated April 28, 1998, with modifications outlined in the *Low Flow Ground Water Sampling* proposal dated November 10, 2000. In accordance with the FSP, the wells were purged a minimum of three well volumes or until the wells went dry, prior to sampling. Low-flow sampling techniques were incorporated into the sampling procedure to decrease the turbidity of the samples collected and to reduce the number of wells that purged dry before three well volumes could be removed. The subsurface water in the on-site till monitoring wells (T-1, T-3, and T-4A) was evacuated and sampled using dedicated PVC bladder-pumps and Teflon-lined polyethylene tubing. Due to poor recovery in till monitoring well T-2A, a disposable Teflon-bailer was used to evacuate and sample the subsurface water samples from this well. The subsurface water in the off-site monitoring wells was evacuated and sampled using a peristaltic pump and dedicated Teflon-lined polyethylene tubing. The intake for the dedicated tubing was placed at the bottom of the screened interval. Due to the poor recovery in till monitoring well T-5, the well was evacuated and sampled using a Teflon-bailer. The volatile organic compound sample (VOC) was collected as soon as possible on the day of purging the well.

The metals and polychlorinated biphenyls (PCBs) samples were filtered using 0.45-micron filters in accordance with Section 6.3 of the FSP. Field measurements of pH,

temperature, specific conductivity, and dissolved oxygen were collected before, during, and after the purging procedure. Field indicator parameters and other information recorded during well purging and sampling are provided in Tables A-1 through A-3 of Appendix A.

C. Surface Water Sampling

Surface water samples were collected from two locations within Unnamed Ditch (SW-1 and SW-2) during the third quarter sampling event. Samples were not collected from the NSL-1 location since water was not flowing from the North Side Landfill discharge to the Unnamed Ditch during the sampling event. The surface water samples were collected as described in Section 6.3 of the FSP. Surface water sample locations are shown on Figure 1. The surface water sample results are summarized in Table 5.

Rain accumulation measurements recorded for the 24-hour and 48-hour period prior to sampling are provided in Table A-4 of Appendix A.

D. Sample Analysis and Results

Following sample collection, the samples were placed in ice-filled coolers and shipped via an overnight courier to CompuChem Laboratories (CompuChem) of Cary, North Carolina, for analysis. Appropriate chain-of-custody protocols were followed throughout sample handling.

Subsurface and surface water samples were analyzed for the parameters listed in Table 3-1 of Revised Exhibit A in accordance with the analytical methods summarized in Table 7-1 of the FSP. Analytical results for the surface, subsurface and the quality assurance and quality control samples for this sampling event are summarized in Table 2 through Table 6. In addition, all quarterly monitoring analytical data to date are presented by location in Appendix B.

E. Quality Assurance and Quality Control Procedures

To monitor the effectiveness of sampling procedures, ENVIRON collected a field blank by pumping laboratory supplied deionized water through the peristaltic pump and tubing into a sample container. For the metals and PCB samples, the deionized water was also passed through a 0.45-micron filter. One field blank was collected and analyzed this quarter. Four trip blanks were submitted to the laboratory to monitor for possible contamination during sample handling, transport, and storage. The trip blanks accompanied the samples and were analyzed for the VOCs listed in Table 3-1 of Revised Exhibit A. The trip and field blank sample results were compared to the most stringent of the Acceptable Stream Concentrations and the Acceptable Subsurface Water Concentrations for each analyte. The trip and field blank sample results are presented in Table 6.

Acetone was detected at low concentrations ($4 \text{ J } \mu\text{g/L}$) in both the field blank sample and the August 15, 2001 trip blank sample. The August 14, 2001 trip blank sample contained low concentrations of 1,2-dichloroethene (total) ($0.3 \text{ } \mu\text{g/L}$), tetrachloroethene ($0.5 \text{ J } \mu\text{g/L}$), toluene ($0.3 \text{ J } \mu\text{g/L}$), trichloroethene ($0.2 \text{ J } \mu\text{g/L}$), and vinyl chloride ($0.9 \text{ J } \mu\text{g/L}$).

Low concentrations of tetrachloroethene, trichloroethene, and vinyl chloride were also detected within the laboratory method blank sample. The August 15, 2001 trip blank sample contained low concentrations of methylene chloride (0.6 µg/L) and toluene (0.2 µg/L).

Low concentrations of manganese (1.4 µg/L) and zinc (2.4 µg/L) were detected in the field blank sample. Both manganese and zinc concentrations were reported below the contract required detection limit within this sample. Low concentrations of manganese and zinc were also detected within the laboratory method blank.

To evaluate the reproducibility of results, ENVIRON collected one duplicate subsurface water sample from the off-site sand/gravel monitoring well S-1 and the off-site till monitoring well T-9. The duplicate samples were collected by pumping the subsurface water from the monitoring wells into two sets of sample containers. The results of the duplicate samples are presented in Table 4 and Table 3, respectively. The results for the duplicate pairs were similar, indicating good reproducibility of the sampling and analytical methods. In addition to the duplicate samples, ENVIRON collected additional sample volume from the surface water sampling point SW-2 for the laboratory matrix spike and matrix spike duplicate (MS/MSD) samples.

If you have any questions about this letter or any other aspects of the project, please do not hesitate to contact us.

Sincerely,

ENVIRON International Corporation

Notes:

All concentrations are in ug/L.

Concentrations in bold exceed the Revised Site Specific Acceptable Subsurface Water Concentrations as presented in the December 22, 2000 Background Report.

[2]-a Revised Site-Specific Acceptable Subsurface Concentrations as determined in the Background Surface and Subsurface Water Monitoring Report dated December 22, 2000, Table 6 values.

U = Analyte not detected. The value shown is the associated detection limit.

B = Analyte was also detected in the laboratory method blank (organic) or analyte value is <contract required detection limit but > instrument detection limit (inorganic).

J = Estimated value.

NA= Sample was not analyzed due to laboratory error.

Notes:

All concentrations are in ug/L.
 Concentrations in bold exceed the Revised Site Specific Acceptable Stream Water Concentrations as presented in the December 22, 2000 Background Report.

[2] = Revised Site-Specific Acceptable Stream Concentrations as determined in the Background Surface and Subsurface Water Monitoring Report dated December 22, 2000, Table 6 values.

U = Analyte not detected. The value shown is the associated detection limit.

B = Analyte was also detected in the laboratory method blank (organic) or analyte value is <contract required detection limit but >= instrument detection limit (inorganic).

J = Estimated Value.

D= Sample quantitated on a diluted sample.

E= Exceeds the upper limit of the calibration range of the instrument for that specific compound.

1 U/0.8 U = Sample result/duplicate sample result.

| Methylene Chloride | [15.7] | 2 B/1 B | 0.8 B | 2 B | 1 | 0.9 J | 2 U | 2 U |
| Tetrachloroethene | [8.85] | 0.5 U/0.5 U | 0.5 U | 0.5 U | 0.5 U | 1.0 U | 1 U | 1 U |
| Toluene | [3,400] | 0.5 U/0.5 U | 0.5 U | 0.5 U | 0.2 J | 0.2 J | 0.2 J | 1 U |
| 1,1,1-Trichloroethane | [5,280] | 0.5 U/0.5 U | 0.5 U | 0.5 U | 0.5 U | 1.0 U | 0.2 J | 1 U |
| 1,1,2-Trichloroethane | [41.8] | 0.5 U/0.5 U | 0.5 U | 0.5 U | 0.5 U | 1.0 U | 1 U | 1 U |
| Trichloroethene | [80.7] | 0.5 U/0.5 U | 0.5 U | 0.5 U | 0.5 U | 1.0 U | 1 U | 1 U |
| Vinyl Chloride | [525] | 0.5 U/0.5 U | 0.5 U | 0.5 U | 0.5 U | 1.0 U | 1 | 0.2 J |
| <i>Semi-Volatile Organics</i> | | | | | | | | |
| Bis (2-ethylhexyl) phthalate | [50,000] | 10 U/10 U | 10 U | 10 U | 10 U | 10 U | 10 U | 10 U |
| Di-n-butyl phthalate | [154,000] | 10 U/10 U | 10 U | 10 U | 10 U | 10 U | 10 U | 10 U |
| 1,2-Dichlorobenzene | [763] | 10 U/10 U | 10 U | 10 U | 10 U | 1 U | 1 U | 10 U |
| Diethyl Phthalate | [52,100] | 10 U/10 U | 10 U | 10 U | 10 U | 10 U | 10 U | 10 U |
| Naphthalene | [620] | 10 U/10 U | 10 U | 10 U | 10 U | 10 U | 10 U | 10 U |
| Phenol | [570] | 10 U/10 U | 10 U | 10 U | 10 U | 10 U | 10 U | 10 U |
| <i>Polychlorinated biphenyls</i> | | | | | | | | |
| Aroclor 1016 | [0.5] | 1 U/1 U | 0.48 U | 0.50 U | 0.46 U | 1.0 U | 1 U | 1 U |
| Aroclor 1221 | [1.0] | 2 U/2 U | 0.95 U | 0.99 U | 0.93 U | 2.0 U | 2 U | 2 U |
| Aroclor 1232 | [0.5] | 1 U/1 U | 0.48 U | 0.50 U | 0.46 U | 1.0 U | 1 U | 1 U |
| Aroclor 1242 | [0.5] | 1 U/1 U | 0.48 U | 0.50 U | 0.46 U | 1.0 U | 1 U | 1 U |
| Aroclor 1248 | [0.5] | 1 U/1 U | 0.48 U | 0.50 U | 0.46 U | 1.0 U | 1 U | 1 U |
| Aroclor 1254 | [0.5] | 1 U/1 U | 0.48 U | 0.50 U | 0.46 U | 1.0 U | 1 U | 1 U |
| Aroclor 1260 | [0.5] | 1 U/1 U | 0.48 U | 0.50 U | 0.46 U | 1.0 U | 1 U | 1 U |
| <i>Inorganics</i> | | | | | | | | |
| Arsenic | [14.0] | 2.1 B/2.1 B | 1.4 U | 4.6 B | 2.1 U | 3.4 U | 4.2 U | 2.8 U |
| Chromium VI | [86.0] | 10 U/10 U | 10 U | 10 U | 10 U | 10 U | 10 U | 10 U |
| Lead | [26.8] | 0.7 U/0.7 U | 1.2 B | 1.0 U | 1.1 U | 2.1 U | 1.7 U | 1.6 U |
| Nickel | [100] | 13.5 U/14 U | 8.3 | 19.7 | 9 | 6.1 B | 9.7 B | 16.5 B |
| Zinc | [152.0] | 1.5 U/1.5 U | 2.4 B | 6.5 B | 3.6 U | 1.2 U | 1.1 U | 11 B |
| Cyanide (Total) | [23.9] | 10 U/10 U | 10 U | 7.1 B | 2.1 B | 2.6 B | 1.9 B | 3.5 B |

Notes:

All concentrations are in ug/L.

Concentrations in bold exceed the Acceptable Stream Concentrations as presented in Revised Exhibit A, Table 3-1.

[J] = Revised Site-Specific Acceptable Stream Concentrations as determined in the Background Surface and Subsurface Water Monitoring Report dated December 22, 2000, Table 6 values.

U = Analyte not detected. The value shown is the associated detection limit.

B = Analyte was also detected in the laboratory method blank (organic) or analyte value is < contract required detection limit but > instrument detection limit (inorganic).

J = Estimated Value.

D = Compound quantitated on a diluted sample.

0.5 U/0.5 U = Sample result/duplicate sample result.
